                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-08-118-534A-6/c

Sequence 6, Application US/08118534A

Patent No. 5501963

Patent No. 5501963

PAPLICANT: burckhardt, jean

TITLE OF INVENTION: Amplification and Detection of Nucleic

TITLE OF INVENTION: Acids in Blood Samples

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 15, Application US/08544332

Sequence 15, Spilcation US/08544332

Patent No. 5935777

GENERAL INFORMATION:

APPLICANT: Mail, Richard L.

APPLICANT: Hail, Richard L.

APPLICANT: Gruidl, Michael E.

TITLE OF INVENTION: No. 5935777el Entomopoxvirus Expression System NUMBER OF SEQUENCES: 77

CORRESPONDENCE ADDRESS:

ADDRESSEE: Gerard H. Bencen

STREET: 2421 N.W. 41st Street, Suite A-1 ', ', ', CITY: Gainesville
                                                                                                 GENERAL INCORMATION:

APPLICANT: Heym, Beate
APPLICANT: Cole, Stewart
APPLICANT: Young, Douglas
APPLICANT: Zhang, Ying
APPLICANT: Telenti, Amalio
APPLICANT: Bodmer, Thomas
TITLE OF INVENTION: Rapid Detection of Antibiotic Resistance
TITLE OF INVENTION: in Mycobacterium Tuberculosis
NUMBER OF SEQUENCES: 66

Patent No. 6664064
GENERAL INFORMATION:
GENERAL INFORMATION:
TAPLICANT: Roche Diagnostics GmbH
TITLE OF INVENTION: Method for melting curve analysis of repetitive PCR
TITLE OF INVENTION: products
TITLE OF INVENTION: 2012/10/003,998A
CURRENT APPLICATION NUMBER: US/10/003,998A
CURRENT FILING DATE: 2001-11-14
NUMBER OF SEQ ID NOS: 8
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 7
LENGTH: 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                                                                                                                          US-09-498-625-12

J Sequence 12, Application US/09498625

J Patent No. 6420346

GENERAL INFORMATION:

APPLICANT: Karin, Nathan

TITLE OF INVENTION:

TITLE OF INVENTION: APPHRANCEUTICAL COMPOSITIONS AND METHODS FOR TREATING RHEUMATOI

TITLE OF INVENTION: ARTHRITS

FILE REPERENCE: 00/20186
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TITLE OF INVENTION: Method and Reagent for the Treatment of Diseases or Conditions Re TITLE OF INVENTION: Levels of Vascular Endothelial Growth Factor Receptor FILE REPERENCE: MHHBOO, 876-47 (237/198)

| Patent No. 618369
| GENERAL INFORMATION:
| APPLICANT: Gabriel, Abram
| TITLE OF INVENTION: Intron-Based Assay for Detecting and Characterizing
| TITLE OF INVENTION: Chromosomal Rearrangement
| FILE REFERENCE: RU-15
| CURRENT APPLICATION NUMBER: US/09/293,569B
| CURRENT APPLICATION NUMBER: US/09/293,569B
| CURRENT APPLICATION NUMBER: 1999-04-15
| NUMBER OF SEQ ID NOS: 14
| SOFTWARE: PatentIn Ver. 2.0
| SEQ ID NO 10
| LENGTH: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
Sequence 18, Application US/08582539
Sequence 18, Application US/08582539
Patent No. 573373
GENERAL INFORMATION:
APPLICANT: Campbell, Kevin P., et al.
APPLICANT: Campbell, Kevin P., et al.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR DETECTING PRIMARY
TITLE OF INVENTION: ADHALINOPATHY
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: Kevin M. Farrell

US-08-98-98-605-118/C

Sequence 118, Application US/08983605A

Patent No. 6720137

GENERAL INFORMATION:
TITLE OF INVENTION: Microsatellite Markers for Plants of the Species
TITLE OF INVENTION: Microsatellite Markers

TITLE OF INVENTION: 2936.10400

CURRENT APPLICATION NUMBER: US/08/983,605A

CURRENT PILING DATE: 1998-05-01

EARLIER PILING DATE: 1998-05-01

MUMBER OF SEQ ID NOS: 466

SOFTWARE: PATENTIN Ver. 2.0

LENGTH: 19
) ORGANISM: Homo Sapiens
) FEATURE:
) NAME/KEY: misc feature
) LOCATION: 1..15
) OTHER INFORMATION: potential microsequencing oligo for 99-128-202.mis2
US-09-218-207-546
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GENERAL INFORMATION:
APPLICANT: Mueller, Manfred W.
TITLE OF INVENTION: Process for the Amplification of Nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 43, Application US/09109663
Patent No. 6277981
GENERAL INFORMATION:
APPLICANT: TL, Guang-Chou
APPLICANT: ISrael, Yedy
TITLE OF INVENTION: AN IMPROVED METHOD FOR DESIGN AND SELECTION OF
TITLE OF INVENTION: EFFICACIOUS ANTISENSE OLIGONUCLEOTIDES
FILE REFERENCE: 9855-301
CURRENT APPLICATION NUMBER: US/09/109,663
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;
